

Parkview Hospital

Heart Institute
Fort Wayne, Indiana

Vintage Archonics teamed with a national architectural firm to design a 110,000 square foot cardiovascular center of excellence. The facility includes six catheterization/EP labs, one stereotaxis procedure, magnetic resonance imaging and electron beam tomography scan spaces plus pre- and post-operative and patient rooms. The building features a separate chilled water loop that serves all the water-cooled medical equipment and medical computer equipment room spaces. This loop is stand alone with 100% back-up capacity, but is tied to the hospital central plant in the summer for improved efficiency. The loop operates with a water-side economizer during the winter periods when the central plant is shut down. The project required analysis and engineering for a new storm water lift station to eliminate ongoing flooding problems in the recessed truck dock areas.

Completed March 2005
Construction cost \$16,000,000
110,000 Square feet
